

Assignment -07

Creating a Virtual Machine, SQL Server Database, and VPN Configuration in Azure Portal

1. Creating VPN Configuration in Azure Portal:
 - Step 1: Choose Create resource and create.
 - Step 2: Sign Up and Set Up VPN
 - Step 3: Then Review and create.
 - Step 4: Taken Screenshots for the outputs.

2. Creating SQL Database in Azure Portal:
 - Step 1: Choose Create resource and create Sql Database.
 - Step 2: Set Up the server name and database name

-Step 3: Go to Disk and make that as public end point.

- Step 4: Then Review and create.

-Step 5: Taken Screenshots for the outputs.

The image displays two screenshots of the Microsoft Azure portal interface.

Top Screenshot: Shows the 'Overview' page for a deployment named 'Microsoft.SQLDatabase.newDatabaseNewServer_b18601e3910b429186d1b'. The deployment is marked as 'Your deployment is complete'. Key details include:

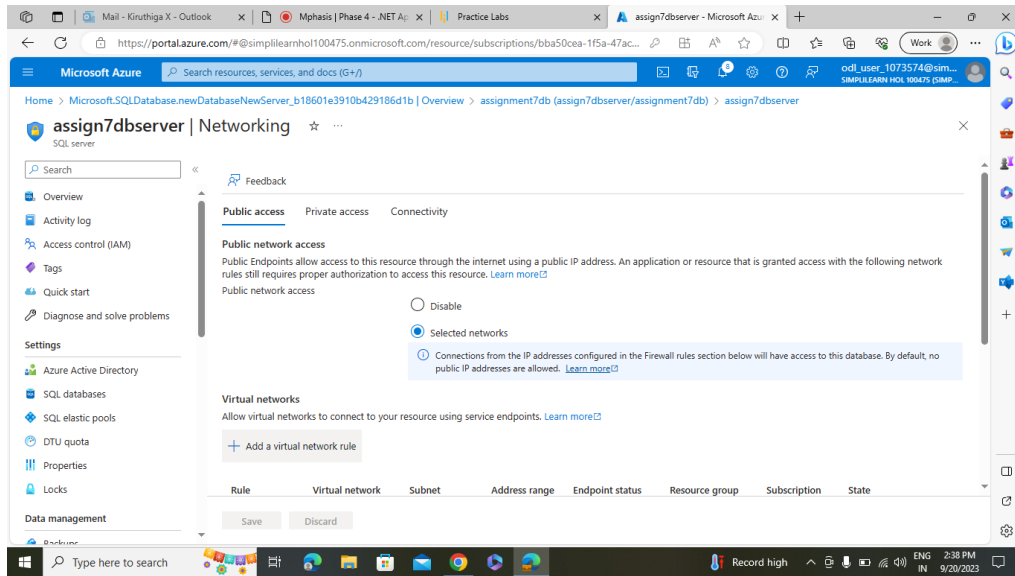

- Deployment name: Microsoft.SQLDatabase.newDatabaseNewServer_b18601e3910b429186d1b
- Subscription: Simplilearn HOL 100475
- Resource group: ODL-azure-1073574
- Start time: 9/20/2023, 2:39:26 PM
- Correlation ID: 2a44ebc5-70de-4f28-a6ed-921292...

A 'Deployment succeeded' notification is visible in the top right corner. The left sidebar shows navigation options like Overview, Inputs, Outputs, and Template. The right sidebar contains links for Cost management, Microsoft Defender for Cloud, and Free Microsoft tutorials.

Bottom Screenshot: Shows the 'Networking' page for the resource 'assign7dbserver'. It displays configuration options for 'Public network access' (set to 'Selected networks') and 'Virtual networks'. A table lists the virtual network configuration:

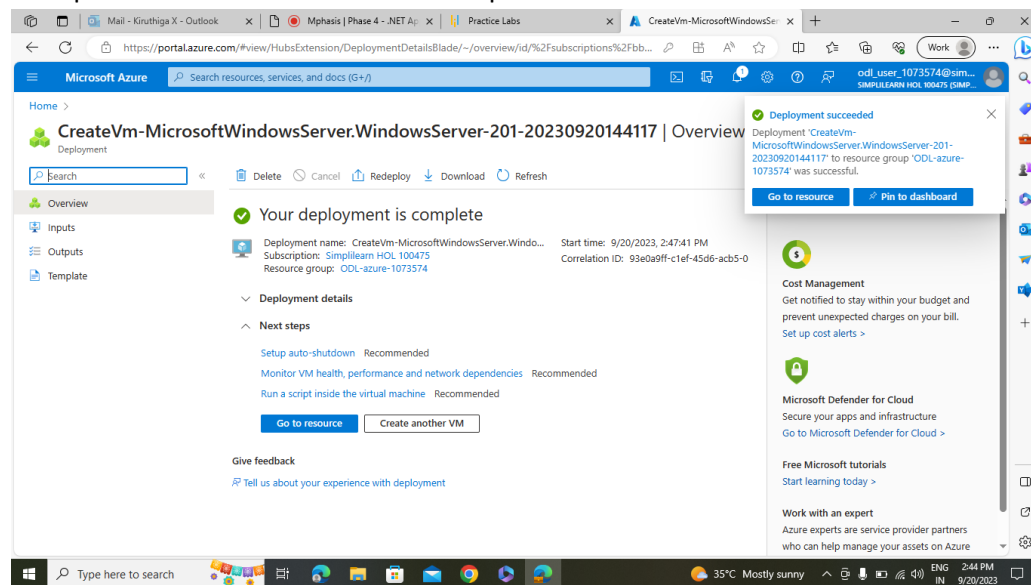

Rule	Virtual network	Subnet	Address range	Endpoint status
	assignment7vpn/default			Enabled

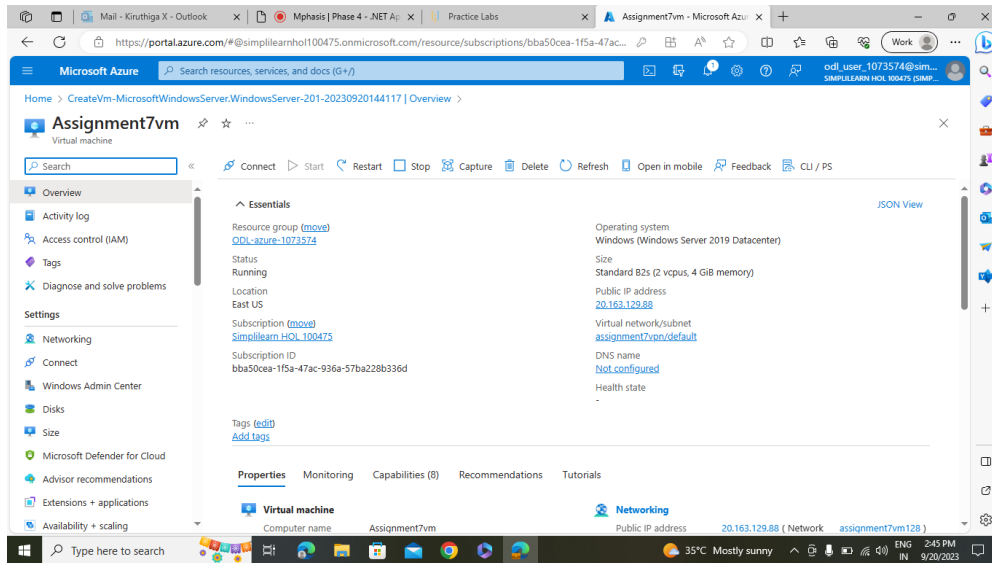

Below this, there are sections for 'Firewall rules' and 'Add your client IPv4 address'. A 'Successfully updated virtual network' notification is shown in the top right corner.

3. Creating Virtual Machine in Azure Portal:

- Step 1: Choose Create resource and create Virtual Machine.
- Step 2: Set Up and set up the Virtual Machines Name.
- Step 4: Then Review and create.
- Step 5: Taken Screenshots for the outputs.

4. Connecting VPN with Virtual Machines Outputs:
